Robotics Camp Helps Prepares Students for High-Tech Jobs

Freshmen and sophomores at the Detroit School for Industrial Arts had the opportunity in June to extend their education during a summer technology camp. In a special program sponsored by Deneb Robotics and Job Skill Technology, the students worked on state-of-the-art computers learning to correct simulated problems in robotics that staff the state's automotive lines.

"The computers and simulation software are the same used by General Motors, Ford, NASA and the U.S. government for submarine exercises," said Gary Kughn, service manager for Job Skill Technology. The school offers a full-blown robotics program which started in the fall.

Business and industry leaders have said the ramp-up time for new employees is simply too long," Kughn said. "We're going to reduce that time. We're on the absolute leading edge with this program."

Equipment for the program was purchased by the school using \$60,000 in grants from the private Hudson Webber and Holly foundations.

Job Skill Technology, Inc. is headquartered in Auburn Hills, MI and specializes in providing technology, curriculum, service and support for education and training.
